

<b>Year 5 – Forces</b>	<p><b>Main Outcomes:</b></p> <ul style="list-style-type: none"> <li>Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object.</li> <li>Identify the effects of air resistance, water resistance and friction, that act between moving surfaces.</li> <li>Recognise that some mechanisms, including levers, pulleys and gears, allow a smaller force to have a greater effect.</li> </ul>	<b>Focus:</b> Science – physics
------------------------	---	---------------------------------

<p><b>What should I already know?</b></p> <ul style="list-style-type: none"> <li>A <b>force</b> is a push or a pull.</li> <li>Things move differently on different surfaces.</li> <li><b>Gravity</b> and magnetism can act without contact.</li> <li>Some materials are magnetic and others are non-magnetic.</li> <li>Magnets have two poles which can attract or repel.</li> </ul>
<p><b>What I will do</b></p> <p>I will have weekly or blocked science lessons. In lessons, I will be taught a skill and I will gain knowledge and understanding through the process of scientific enquiry (observing over time; pattern seeking; identifying, classifying and grouping; comparative and fair testing, (controlled investigations); and researching using secondary sources).</p> <p><u>Possible lines of enquiry</u></p> <ul style="list-style-type: none"> <li>Explore falling objects, such as paper cones, cupcake cases, parachutes and sycamore seeds, and raise questions about the effects of air resistance.</li> <li>Design and make a variety of parachutes and carry out fair tests to determine which designs are the most effective.</li> <li>Experience forces that make things begin to move, get faster or slow down, for example, by driving the goblin car.</li> <li>Explore the effects of friction on movement and find out how it slows or stops moving objects, for example, by observing the effects of a brake on a bicycle wheel.</li> <li>Explore the effects of levers, pulleys, gears and/or springs and simple machines on movement, for example, by designing and making products that use these things.</li> <li>Explore resistance in water by making and testing boats of different shapes.</li> <li>Find out how scientists, for example, Galileo Galilei and Isaac Newton helped to develop the theory of gravitation.</li> </ul>
<p><b>Resources</b></p> <p>Hamilton Science planning: forces <a href="https://www.hamilton-trust.org.uk/science/year-5-science/forces-may-forces-be-you/">https://www.hamilton-trust.org.uk/science/year-5-science/forces-may-forces-be-you/</a> (all planning also saved on SharePoint).</p>

Vocabulary	Meaning
accuracy	the closeness of the measured value to a standard or true value
air resistance	a type of <b>friction</b> between air and another material
balancing force	two <b>forces</b> of the same size acting in opposite directions. If two balanced <b>forces</b> are acting on an object, that object will not change its <b>motion</b>
causal relationship	when one thing is responsible for causing the other thing
diagram	a drawing, image, or sketch that is used to help the reader visualise what the author is describing in the text
effort	the <b>force</b> applied to make the object move
fall	a <b>motion</b> towards a place where an object will have a lower energy
force	a <b>push</b> or a <b>pull</b>
friction	a <b>force</b> between two surfaces that are sliding, or trying to slide, across each other
fulcrum	the place where the <b>lever</b> pivots
gear	a rotating part in a machine it has teeth cut around its circumference (edge)
gravity	a <b>force</b> that <b>pulls</b> everything down toward the centre of the Earth.
lever	a simple machine used to increase <b>force</b>
mechanisms	complex machines that change the input <b>forces</b> and <b>motion</b> into a desired output <b>force</b> and <b>motion</b>
motion	the process of an object moving or being moved
newtons	the amount of <b>force</b> required to make a mass of 1kg accelerate (move) at a rate of 1 metre per second squared
precision	how precise or exact something is
pulleys	simple machines that make it easier (reduce the effort required) to lift or move a heavy object
ratio	a way of splitting up amounts and keeping them in proportion
resistance force	a <b>force</b> that acts in the opposite direction of moving objects
support/refute	to prove right (support) or wrong (refute) by argument or evidence
transfers	to move to a different place or thing
upthrust	any <b>force</b> that is causing something to be pushed upwards
variable	any one of the elements of the test which could be changed
weight	the <b>gravitational force</b> upon an object

Knowledge to understand	
<b>Friction</b> is the <b>force</b> between surfaces that are touching.	It acts against movement. <b>Friction</b> gives us grip: without grip, starting and stopping is hard. <b>Friction</b> produces heat.
Air and water slow you down as you move through them. This is called <b>resistance</b> .	Streamlined objects have a shape that moves easily through the air or water. A parachute has a large surface area so it moves slowly through the air. It is difficult to run in water because it pushes against you.
<b>Gravity</b> acts between objects and the Earth.	It pulls objects towards the centre of the Earth. Unsupported objects <b>fall</b> towards the Earth. Things on the ground are pulled down by <b>gravity</b> too (which is why you can't fall off the Earth).
<b>Levers</b> are simple machines used to increase <b>force</b> .	<b>Levers</b> have a long arm and a <b>fulcrum</b> , which is where the arm pivots (a turning point). The object being lifted is called the load, and the <b>force</b> applied to that load through the arm to make the object move is called the <b>effort</b> . So, a lever is the name of the structure that connects these other three parts.
<b>Pulleys</b> are simple machines that make it easier (reduce the <b>effort</b> required) to lift or move a heavy object.	<b>Pulleys</b> includes at least one wheel and a length of rope. With a <b>fixed pulley</b> , the wheel is secured to a single spot. The same amount of <b>force</b> is required to pull the object up as if it were being lifted, but the <b>pulley</b> changes the direction of the <b>force</b> . This means that although the object feels as heavy to lift, it can be pulled from a much more convenient angle.
A <b>gear</b> is a rotating part (wheel) in a machine, that can increase the power of a turning <b>force</b> .	<b>Gears</b> are wheels with teeth cut around their circumference (edge) that slot together. When one <b>gear</b> is turned, the other one turns as well. If the <b>gears</b> are of different sizes, they can be used to increase the power of a turning <b>force</b> . The smaller wheel turns more quickly but with less <b>force</b> , while the bigger one turns more slowly with more <b>force</b> .

Skills to learn
<ul style="list-style-type: none"> <li>➤ planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary</li> <li>➤ taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate</li> <li>➤ recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs</li> <li>➤ using test results to make predictions to set up further comparative and fair tests</li> <li>➤ reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and degree of trust in results, in oral and written forms such as displays and other presentations</li> <li>➤ identifying scientific evidence that has been used to support or refute ideas or arguments</li> </ul>
<p>Cross-curricular (maths)</p> <ul style="list-style-type: none"> <li>➤ use all four operations to solve problems involving measure using decimal notation, including scaling and problems involving simple ratios</li> <li>➤ scale weights and lengths using appropriate calculations</li> </ul>
Equipment to become familiar with
<p>Cameras</p> <p>Gear construction kits (see red boxes in resources room) or Lego™ technic (Wojciech from PrepareRobo ltd <a href="mailto:office@prepare robo.com">office@prepare robo.com</a> runs an excellent Lego™ robot building workshop (can involve coding) for approx. £4 per child + travel expenses – prices as of Feb 2023).</p> <p>Force meters (Newton meters)</p>

Evidence of Learning
<p>Science books</p> <p>Photos</p> <p>Videos</p> <p>Pupil conferencing</p> <p>Teaching and learning observations</p> <p>Learning walks</p> <p>Data analysis</p>

How will I know what I've learnt?
<p>See KS2 teacher assessment exemplification for science</p> <p><a href="https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/763065/2018_key_stage_2_teacher_assessment_exemplification_science.pdf">https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/763065/2018_key_stage_2_teacher_assessment_exemplification_science.pdf</a></p> <p>See also Hamilton Science_Assessment_Y5 (saved in planning folder on Sharepoint).</p> <p>KS2 quizzes:</p> <p><a href="https://gcequiz.com/quiz/ks2-science-quizzes">https://gcequiz.com/quiz/ks2-science-quizzes</a></p> <p><a href="https://churchfieldsjunior.com/test-your-skills-science/">https://churchfieldsjunior.com/test-your-skills-science/</a></p>
